Amend claim 4 as follows:

Claim 4 (amended): A method for preferentially dissolving nascent intravascular blood clots in a subject as compared to effect on pre-existing haemostatic clots in the subject comprising administering to the subject a plasminogen activator biocompatibly coupled to a red blood cell carrier.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claim 4 is novel and unobvious over the prior art of record or any combination thereof. Prior art does not teach or suggest use of subject a plasminogen activator

conjugated to a red blood cell carrier for preferential dissolving nascent intravascular blood clots while sparing previously formed haemostatic clots. As taught in specification (p. 2,line 9) in the surgical settings, the ideal thromboprophylactic agent effectively dissolves nascent pathological thrombi developed in a post-operative and recovery periods, while not dissolving hemostatic fibrin clots formed during and immediately after the operation. Conjugation of a plasminogen activator to a red blood cell carrier not only increases lifetime of a plasminogen activator (p. 13) but also allows for preferential dissolving nascent intravascular blood clots while sparing previously formed haemostatic clots (pages 21-23).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
